Agent-Based Modelling and Network Dynamics Akira Namatame, Shu-Heng Chen

While the significance of networks in various human behavior and activities has a history as long as human's existence, network awareness is a recent scientific phenomenon. The neologism network science is just one or two decades old. Nevertheless, with this limited time, network thinking has substantially reshaped the recent development in economics, and almost all solutions to real-world problems involve the network element.

This book integrates agent-based modeling and network science. It is divided into three parts, namely, foundations, primary dynamics on and of social networks, and applications. The authors begin with the network origin of agent-based models, known as cellular automata, and introduce a number of classic models, such as Schelling's segregation model and Axelrod's spatial game. The essence of the foundation part is the network-based agent-based models in which agents follow network-based decision rules. Under the influence of the substantial progress in network science in late 1990s, these models have been extended from using lattices into using small-world networks, scale-free networks, etc. The text also shows that the modern network science mainly driven by game-theorists and sociophysicists has inspired agent-based social scientists to develop alternative formation algorithms, known as agent-based social networks. It reviews a number of pioneering and representative models in this family. Upon the given foundation, the second part reviews three primary forms of network dynamics, such as diffusions, cascades, and influences. These primary dynamics are further extended and enriched by practical networks in goods-and-service markets, labor markets, and international trade. At the end, the book considers two challenging issues using agent-based models of networks: network risks and economic growth.

From reader reviews:

Deborah Lake:

What do you consider book? It is just for students as they are still students or the item for all people in the world, the particular best subject for that? Just you can be answered for that query above. Every person has different personality and hobby for each other. Don't to be pushed someone or something that they don't want do that. You must know how great in addition to important the book Agent-Based Modelling and Network Dynamics. All type of book could you see on many methods. You can look for the internet methods or other social media.

Kristen Zamora:

What do you concerning book? It is not important to you? Or just adding material when you need something to explain what the ones you have problem? How about your extra time? Or are you busy individual? If you don't have spare time to accomplish others business, it is make you feel bored faster. And you have free time? What did you do? Everyone has many questions above. They must answer that question because just their can do which. It said that about book. Book is familiar in each person. Yes, it is correct. Because start from on pre-school until university need this specific Agent-Based Modelling and Network Dynamics to read.

Teresa Dillard:

As people who live in typically the modest era should be update about what going on or facts even knowledge to make these individuals keep up with the era which can be always change and make progress. Some of you maybe will update themselves by studying books. It is a good choice for you personally but the problems coming to a person is you don't know which you should start with. This Agent-Based Modelling and Network Dynamics is our recommendation so you keep up with the world. Why, as this book serves what you want and need in this era.

Eileen Moore:

This book untitled Agent-Based Modelling and Network Dynamics to be one of several books in which best seller in this year, that's because when you read this publication you can get a lot of benefit onto it. You will easily to buy this specific book in the book retailer or you can order it by using online. The publisher with this book sells the e-book too. It makes you quicker to read this book, since you can read this book in your Smartphone. So there is no reason for you to past this book from your list.
