How to Find a Habitable Planet (Science Essentials) James Kasting

Ever since Carl Sagan first predicted that extraterrestrial civilizations must number in the millions, the search for life on other planets has gripped our imagination. Is Earth so rare that advanced life forms like us--or even the simplest biological organisms--are unique to the universe? *How to Find a Habitable Planet* describes how scientists are testing Sagan's prediction, and demonstrates why Earth may not be so rare after all.

James Kasting has worked closely with NASA in its mission to detect habitable worlds outside our solar system, and in this book he introduces readers to the advanced methodologies being used in this extraordinary quest. He addresses the compelling questions that planetary scientists grapple with today: What exactly makes a planet habitable? What are the signatures of life astronomers should look for when they scan the heavens for habitable worlds? In providing answers, Kasting explains why Earth has remained habitable despite a substantial rise in solar luminosity over time, and why our neighbors, Venus and Mars, haven't. If other Earth-sized planets endowed with enough water and carbon are out there, he argues, chances are good that some of those planets sustain life. Kasting describes the efforts under way to find them, and predicts that future discoveries will profoundly alter our view of the universe and our place in it.

This book is a must-read for anyone who has ever dreamed of finding other planets like ours--and perhaps even life like ours--in the cosmos.

From reader reviews:

Melissa Wilcox:

As people who live in typically the modest era should be up-date about what going on or info even knowledge to make all of them keep up with the era that is always change and move forward. Some of you maybe will update themselves by looking at books. It is a good choice for you but the problems coming to an individual is you don't know what kind you should start with. This How to Find a Habitable Planet (Science Essentials) is our recommendation to help you keep up with the world. Why, because book serves what you want and want in this era.

Diana Ham:

The particular book How to Find a Habitable Planet (Science Essentials) has a lot associated with on it. So when you make sure to read this book you can get a lot of help. The book was written by the very famous author. Tom makes some research prior to write this book. This book very easy to read you can get the point easily after scanning this book.

Marcy Madison:

You can get this How to Find a Habitable Planet (Science Essentials) by look at the bookstore or Mall. Just viewing or reviewing it could to be your solve difficulty if you get difficulties to your knowledge. Kinds of this reserve are various. Not only by written or printed but in addition can you enjoy this book by e-book. In the modern era such as now, you just looking from your mobile phone and searching what your problem. Right now, choose your current ways to get more information about your publication. It is most important to arrange yourself to make your knowledge are still revise. Let's try to choose right ways for you.

Lucille Chenier:

Guide is one of source of expertise. We can add our information from it. Not only for students but in addition native or citizen will need book to know the revise information of year to year. As we know those publications have many advantages. Beside most of us add our knowledge, also can bring us to around the world. By book How to Find a Habitable Planet (Science Essentials) we can get more advantage. Don't that you be creative people? For being creative person must want to read a book. Simply choose the best book that ideal with your aim. Don't always be doubt to change your life with that book How to Find a Habitable Planet (Science Essentials). You can more inviting than now.
